**Job Description:**

The person in this position is responsible for the software validation testing (system testing) of new software and firmware designs as well as validating product software changes. Tasks includes defining test methods and create test plans for new or updated software projects to determine if the software will perform accurately and reliably according to documented requirements as well as established standards under both normal and abnormal conditions. The job also includes writing test plans, development of automated testing routines/systems using software controlling test measurement equipment. Also the job requires documenting, keeping organized records of tests, writing final verification and defect reports suitable for publishing to USSI customers. The individual will be required to work closely with the Program Management, software development engineers, and customer representatives. Consult with product development to evaluate system interfaces, operational requirements, and performance requirements
